IBM Softlayer

Chris Martin
Cloud Channel Manager

SOFTLAYER[®]

Cloud computing can help business and IT create and deliver value in fundamentally new ways.

Business value

Enable new business models and client relationships

Deliver IT without boundaries

Improve the agility and dexterity of business

Speed delivery of product and service innovation

IT value

Cut IT expense and complexity

Accelerate time to market

Innovate business models

Cloud as a Growth Engine for Business

Think it.

Strategize how to use cloud to drive revenue growth and efficiencies

Build it.

Build and run your private or hybrid cloud

Tap into it.

Utilize cloud services delivered from IBM Cloud

Broad portfolio of infrastructure choices for greater business agility

- Build and customize the environment based on what you want to achieve
- Fine-tune to meet changing business needs or respond to competitive pressures
- Single integrated and common management portal for all services
- Additional services for compute, storage, network, security, platform management and big data are available

SoftLayer Global Footprint*

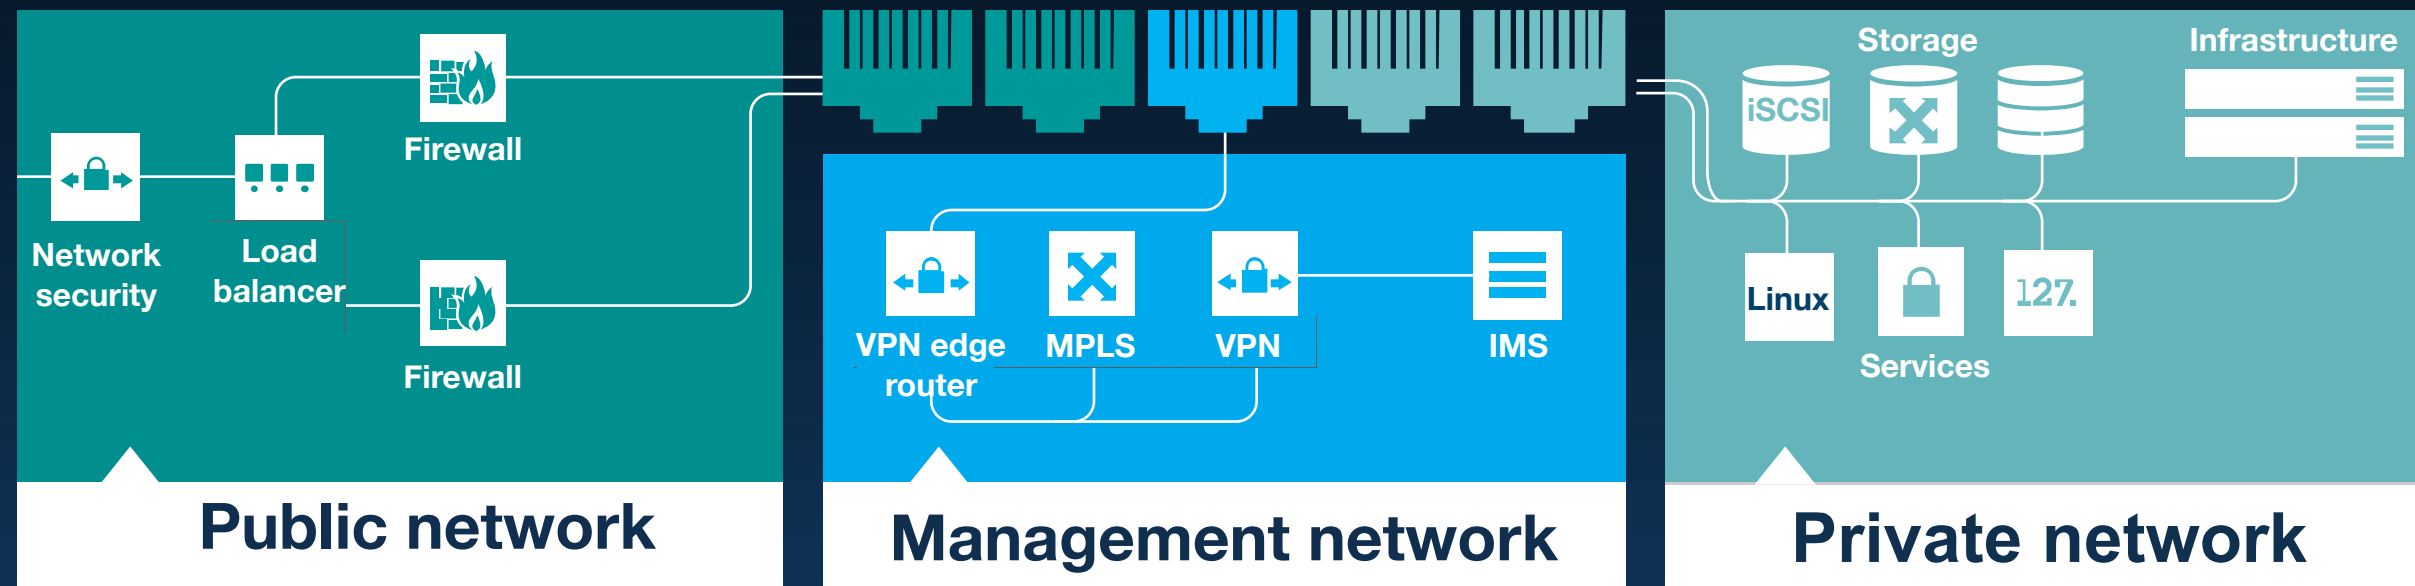

\$1.2B investment extending global footprint to 25 Data Centres and 30 Network PoPs in 2014

- Every upstream network port is multiple 10G and every rack is terminated with 40G of connectivity.
- This includes two 10G connections to the public Internet and two 10G connections to our private network.

Source: <http://www.softlayer.com/our-platform>

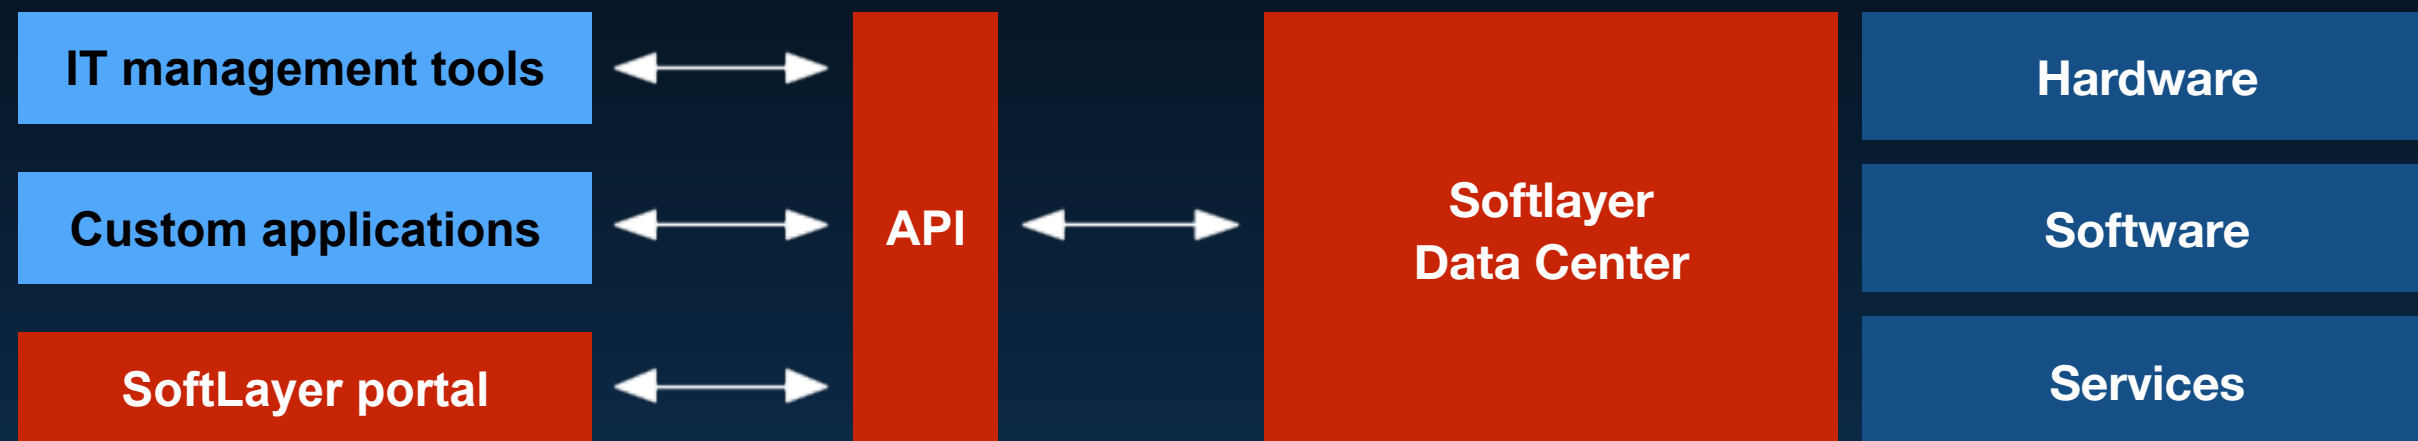

* Year end 2014

Our triple-network architecture is fundamental to infrastructure performance

SoftLayer integrates three distinct and redundant gigabit network architectures—public, private, and data center-to-data center management—into a network-within-a-network topology.

Granular API offers more control, increased productivity and security

Developers and administrators can:

- Directly access more than 240 back-end services through more than 3,400 API methods
- Control APIs at the function level, not just by pre-defined classes of APIs, for greater security
- Build auto-scaling environments for on-demand growth

InfoWorld Benchmark Comparison with other Public Clouds (smallest available single threaded instance – lower is better)

Instances tested were the smallest available, single-threaded, running the default Java Runtime Engine. For details on the DaCapo benchmark suite, see <http://dacapobench.org>. Source: Peter Wayner, InfoWorld.

Build your dynamic cloud on Softlayer

**Complete control,
access, and
transparency**

**Single-tenant and
multi-tenant
environments**

**Complete portfolio
available
on demand in all
data centers**

**Seamless fault-
tolerant,
multi-site topography**
